

MBL | LOEB LABORATORY

Loeb Laboratory is a cornerstone facility on the MBL campus for biological and biomedical research and training.

Since 1970, it has housed the MBL's advanced, world-renown laboratory courses in neuroscience, embryology, cell biology, microbiology, and other life sciences.

In spring 2009, a \$25 million gut renovation of Loeb Laboratory began, funded by a \$15 million grant from the Howard Hughes Medical Institute and a \$10 million grant from the State of Massachusetts Life Sciences Center.

When renovations are complete in spring 2010, Loeb Laboratory will feature state-of-the-art research laboratories and building systems; a "smart" computer training center; a centralized microscopy facility; and a resource center for research in regenerative biology and medicine.

The Design & Construction Team:

- Tsol/Kobus & Associates**
Architects | Cambridge, MA
- Odeh Engineers**
Structural Engineer | Providence, RI
- AHA Consulting Engineers**
MEP/FP Engineer | Lexington, MA
- Shawmut Design & Construction**
Construction Manager | Boston, MA
